

# PROJECT SHOWCASE

## WESTSIDE PRIVATE MEDICAL FACILITY, TARINGA, QLD

This \$32.5m project features:

- Hospital, radiation oncology bunkers and childcare facility.
- Consulting suites.
- Residential Sky Homes.
- Hotel, Retail & Commercial
- High quality finishes were required throughout this up-market development, hence the extensive use of DecorLini lineal grooved acoustic panels throughout the public areas of the building.

Architects Mode Design had several criteria to fulfill in these areas:

- A high level of foot traffic.
- The need for acoustic control, given the hard surfaces throughout the space.
- Wall linings that had the high impact resistance that is called for in health facilities.
- DecorLini was the optimal choice; it ticked every box! Decor Systems supplied the DecorLini planks pre-finished in a Tasmanian Oak veneer, on time, within budget and fully code compliant.
