

PROJECT SHOWCASE

WESTMEAD HOSPITAL REDEVELOPMENT

This landmark project is a showcase of Decor Systems ingenuity.

HDR Rice Daubney developed a design intent for the triangular acoustic ceiling bays. Decor Systems were able to propose a cost-effective method of manufacturing these panels utilising a similar drill pattern to our VOGL Perforated Plasterboard to match the visual appearance required. The Decor Systems R+D department assembled a custom prototype highlighting the integrated upturns with large radii to present to the client.

The prototypes met the brief precisely and were custom manufactured at a competitive price and delivered to site for immediate installation.

Complementing the overall ambience of the project, the Vogl Plasterboard panels made a massive contribution to both the acoustic performance of the space and the overall ambience
